

META-AMINO BLEND™

>> 30 SERVINGS • NET WT: 328.5 G (11.6 OZ) | 0300355.030

SUPPORTS HEALTHY CARDIOVASCULAR FUNCTION, GROWTH HORMONE LEVELS & FAT METABOLISM*

5 AMINO ACIDS IN AN EASY TO MIX POWDER

>> An amino acid complex specifically formulated to act as a secretagogue to support the release of the body's own Human Growth Hormone (HGH)*. Easily dissolves in cold beverages.

Meta-Amino Blend™ focuses on the release of stored human growth hormone by combining the proper quantities and ratios of L-Glutamine, L-Arginine, L-Ornithine, L-Lysine and Glycine. By supporting healthy HGH levels along with the synergistic and individual effects of the free form amino acids, this product benefits a more healthy aging process.*

Meta-Amino Blend™ supports:

- ✓ HGH levels within normal ranges*
- ✓ Improvement in workout recovery*
- ✓ Cardiovascular health*
- ✓ Reduction in sugar cravings*
- ✓ Reduction in body fat*

About HGH

✓ The human growth hormone is made up of 191 amino acids and production is at its peak when we are young. HGH affects all cells and almost all bodily tissues. It is considered a master hormone, which controls many organ and body functions. HGH is the primary hormone responsible for stimulating tissue repair, cell replacement, normal brain function and enzyme production.* Its release and circulation stimulates the liver to manufacture IGF-1.*

About IGF-1

IGF-1 is the active, growth-stimulating metabolite associated with the beneficial effects of HGH therapy. Once HGH is released from the pituitary glands, it circulates to the liver where it is converted to IGF-1 which then stimulates growth in a variety of tissues. The beneficial effects of elevated IGF-1 levels are well documented and are associated with the following:

- ✓ Decreased body fat content*
- ✓ Enhanced lean body mass*
- ✓ Healthy cholesterol levels*
- ✓ Efficient cardiac output*
- ✓ Increased skin elasticity*
- ✓ Improved memory*
- ✓ Increased libido*
- ✓ Increased energy and sense of well-being*

Human Growth Hormone:

AGING

✓ With age, IGF-1 levels decline due to the inability of the pituitary gland to adequately release HGH. This is due in part to a hormone called somatostatin, which acts as an HGH inhibitor. At age 21, the normal level of circulating HGH is about 10 milligrams per deciliter of blood, while at age 61 it is 2 milligrams per deciliter, a decrease of 80%!

CARDIOVASCULAR HEALTH

✓ IGF-1 supports the reduction of body fat content and encourages the movement of cholesterol in a healthy and desirable direction.* It also supports cardiac cells which helps to improve cardiac function.* By supplying amino acids that are essential in the production of balance human growth hormone levels, **Meta-Amino Blend™** supports cardiovascular health.*

FAT METABOLISM

✓ IGF-1 functions to support the burning of fat by making it available as fuel.* This process known as lipolysis is triggered when the growth hormone binds to fat cell receptors where it can cause a series of enzymatic reactions in the cell to break down fat.* Providing amino acids that aid in the release of growth hormones, **Meta-Amino Blend™** supports healthy weight management, improved metabolism and lean muscle mass.*

Supplement Facts

Serving Size 1 Scoop (10.95 g)

Servings Per Container 30

Amount per Serving

L-Glutamine 6,000 mg
L-Arginine 1,000 mg
L-Ornithine 1,000 mg
L-Lysine 1,250 mg
Glycine 1,000 mg

% Daily Value
